

WildCast — Deck Review

Prepared by Julia · Wild Stack Internal · June 2026

OVERALL VERDICT

Solid foundation — needs 3 updates before resharing

Annika's deck is well-structured and the problem/solution framing is strong. However the AI copy feature — now a headline selling point — is underspecified, the MVP scope has shifted (templates must be pre-loaded), and two tech stack details need correcting for accuracy.

SLIDE-BY-SLIDE STATUS

Slide	Title	Status	Action
1	Cover / Hero	✓ Keep	—
2	The Problem	✓ Keep	Best slide in the deck. Don't touch.
3	How WildCast Works	✓ Keep	Minor: add 'templates pre-loaded' to step 2
4	Architecture	■ Update	Puppeteer → Ghostscript. Netlify → Vercel. Expand AI layer.
5	Data Privacy / GDPR	✓ Keep	Thorough. No changes needed.
6	Figma Readiness	✓ Keep	Accurate pre-build checklist.
7	Build Plan	■ Update	Templates-in-tool moves to Phase 1. Figma API stays Phase 2.
8	Next Steps	✓ Keep	Accurate owner split.
9	Closing	✓ Keep	Strong close.
NEW	AI Copy Assistant	✗ Missing	Add full slide explaining corpus, cost, suggestions UX.

ANNIKA'S AI COPY FEATURE — THE REAL ANSWER

How it works (simpler than expected)

No fine-tuning required. No new model to train. The Anthropic API you already have is all you need.

Step	What happens
1. Build the corpus	Collect every Wolt headline, promo line, CTA, campaign tagline ever used → save as a .txt file. This is the
2. System prompt	That corpus file is pasted into Claude's system prompt alongside tone guidelines: 'You write in Wolt's voi
3. User types	As the partner fills in their restaurant name, offer, and occasion — those values are sent to Claude with t
4. 3 suggestions appear	Claude returns 3 on-brand options in under 2 seconds. Partner picks one or edits freely.
5. Corpus updates	Julia adds new campaign lines to the .txt file quarterly. No retraining. No cost. Just paste and redeploy.

Cost per export (AI suggestions)	Who manages it	API needed
----------------------------------	----------------	------------

~R0.02 – R0.05	Julia — update a .txt file quarterly	Anthropic API (already have it)
----------------	--------------------------------------	---------------------------------

Bottom line: this will match or beat Annika's ChatGPT experience once the corpus is populated. The quality of suggestions is directly proportional to how much Wolt copy you feed it.

TECH STACK CORRECTIONS

Item	Deck says	Should say	Why
CMYK export	Puppeteer	Ghostscript via Vercel Serverless	Puppeteer renders HTML→PDF (RGB only). Ghostscript does true CMYK
Hosting	Netlify	Vercel	Ghostscript can't run on Netlify. Vercel Serverless Functions support binary
AI	Claude API (mentioned)	Claude API — expand to full slide	Currently one badge on a card. Needs its own architecture slide given it's

MVP SCOPE SHIFT

Templates pre-loaded moves from Phase 2 → Phase 1

Annika's requirement that templates are available inside the tool immediately means the Figma API (live template pulling) is still Phase 2 — but templates must be manually exported from Figma and hardcoded into the app for MVP. This is actually faster to build and de-risks the first partner demo.

Feature	Old Phase	New Phase
Single hardcoded Promo template	Phase 1	Phase 1 ✓
All template types pre-loaded (New Opening, Seasonal etc.)	Phase 2	Phase 1 ✓
Figma API — live template pulling + auto field detection	Phase 2	Phase 2 (unchanged)
Multi-template library with admin management	Phase 2	Phase 2 (unchanged)

NEXT ACTIONS

Julia

- Update CLAUDE.md spec to reflect AI corpus feature + Ghostscript + templates-in-tool for Phase 1
- Rebuild slide deck in Google Slides with corrected stack + new AI Copy slide
- Begin Figma template audit: layer naming, editable fields, character limits per template
- Collect Wolt corpus file from Annika (all past headlines & promo lines)

Annika

- Send all Wolt copy corpus to Julia (headlines, promo lines, CTAs from all campaigns)
- Confirm Wolt printer ICC profile (likely ISOcoated_v2_300 for EU)
- Start DPA conversation with Wolt legal — this is a hard blocker before any partner data flows
- Validate demand: pitch WildCast to Wolt Germany contact

Hard blockers: DPA signed before any code touches partner data. Figma audit complete before build starts.
